

Winter Weather Advisory for Southeast Nebraska Thursday

(KLZA)-- A winter weather advisory is in effect from 3:00 A.M. Thursday to midnight Thursday night for central and southeast Nebraska and eastward into southwest Iowa.

The National Weather Service predicts mixed precipitation with total snow accumulations of up to 2 inches and ice accumulations of one-tenth to two-tenths of an inch.

The ice will result in difficult travel conditions and travel delays. There could also be reduced visibilities at times.

Snow should mix with or change to light freezing drizzle Thursday morning for all but far northeast Nebraska. Precipitation should lighten up around midday, then another round of light snow and freezing drizzle is expected Thursday afternoon and Thursday evening ending from west to east.
