Stream advisory rescinded for South Fork of the Nemaha River

**(KMZA)--The Kansas Department of Health and Environment has rescinded a stream advisory that was issued July 13 for the South Fork of the Nemaha River located north of Seneca.**

**The stream advisory was due to water contamination from a confined animal feeding facility, which resulted in a fish kill.**

**The advisory was issued because elevated bacteria and contaminants may have been present in the stream.**

**KDHE said Friday the stream has been deemed safe for wading and livestock use.**
