

AHS student discovered outside; transported for treatment

(KAIR)--Hospital treatment was necessary after an Atchison High School student was located in need of medical care Thursday.

According to a release from the Atchison Public Schools of USD 409 the student “was found unresponsive on the [high school] track” after school had ended for the day.

The release notes that the student was discovered by a staff member, and transported for treatment by Atchison County EMS.

At the time the student was discovered, temperatures approached 100, but Superintendent of the Atchison Public Schools, Dr. Renee Scott, told MSC News it “was not practice related,” adding that “school had been dismissed.”

Other than those details, Scott said late Thursday afternoon that she was “unable to give any other information at this time.”
